Pandora's Box is open in Delhi

We just exposed the dark truth behind the deer from A.N. Jha Deer Park, Hauz Khas.

Authorities want to ship them to Rajasthan tiger reserves... to use them as live bait.

What we found will break your heart.

Citizens unite to voice concerns over proposed Deer Translocation

On Sunday, 19 April 2026 at 9:00 AM, a large group of concerned citizens and representatives from multiple organizations gathered at the entrance of A.N. Jha Deer Park, Hauz Khas, to protest against the proposed translocation of captive spotted deer to tiger-inhabited sanctuaries in Rajasthan.

The demonstration saw participation from the Animal Welfare Society of India, New Delhi Nature Society, Walk for Animals, Habitat, and Campaign for Differently Abled, along with students, teachers, and professors from Delhi University, JNU, and TERI.

They were joined by long-time morning walkers who have frequented the park for decades.

Protesters expressed deep concern and outrage over the plan, highlighting that these shy and vulnerable deer, with limited natural defenses against predators such as tigers and leopards, are being treated as expendable rather than protected within their urban habitat.

Are We Cockroaches

CJI Surya Kant says there are "parasites" attacking the system.

"There are youngsters like cockroaches, who don't get any employment and don't have any place in the profession. Some of them become media, some of them become social media, some of them become RTI activists, some of them become other activists, and they start attacking everyone." - CJI.

When a Lake Dies, a City Loses Its Soul

The fish in Sanjay Lake did not just die because of mere bad luck. They died because we as a society stopped caring enough about our lakes, our ecosystems and the delicate living systems that actually keep our cities liveable and breathable.

Reducing Carbon Footprint Summer Fields School

Summer Fields School invited the New Delhi Nature Society to serve as judges for an inter-school advertisement competition focused on reducing carbon footprints.

The event brought together enthusiastic students from various schools who presented innovative and impactful campaigns promoting sustainable living, energy conservation, waste reduction, and climate-conscious choices.

It was inspiring to witness young minds using creativity and communication to spread awareness about environmental responsibility.

The competition highlighted the growing concern among students for the planet and showcased how education and creativity can play a powerful role in encouraging a greener and more sustainable future.

Zoos: A Sanctuary or A Silent Prison

Zoos may entertain humans, but they often limit the freedom and wellbeing of animals.

In the wild, animals roam across vast forests and grasslands, while in zoos many are confined to small enclosures of only one or two acres.

Some animals are isolated, causing loneliness and stress, while others are overcrowded in restricted spaces.

Such captivity can lead to depression and unnatural behaviour.

Although zoos claim to support conservation, no artificial enclosure can truly replace an animal's natural habitat.

Wildlife deserves protection in freedom, not lifelong confinement behind barriers for human entertainment.

Reset With Nature

WATCH VIDEO

WATCH VIDEO

Two young nature enthusiasts, Muskan and Karishma, organised a meaningful “21 Days Reset with Nature” programme to help people reconnect with the environment and themselves.

The programme included nature walks, poetry with nature, meditation, craft activities, and interactive learning about trees and birds.

Participants experienced the calming and healing effects of spending mindful time in nature.

The New Delhi Nature Society (NDNS) was also a part of this inspiring initiative, supporting its vision of promoting environmental awareness, creativity, and emotional well-being through a deeper connection with the natural world.

The ABC Rule

Per the directions read out today in SMW(C) No. 5/2025

- 1** The ABC Rules stand upheld - the foundation everything else rests on.
- 2** At least one ABC centre per district is to be established across all States and UTs.
- 3** Every High Court is to institute a suo motu matter and receive compliance affidavits - a significant structural step.
- 4** NHAI has been directed to address stray cattle on national highways.
- 5** Extension of directions to other high-footfall public areas has been left to the concerned authorities to assess.
- 6** Consolidated compliance report due before the Hon'ble Supreme Court by 17 November 2026.

The judgement is noteworthy for the weight it places on ground-level implementation. Detailed order awaited.

We Know ABC Works For Strays, But We Don't Learn It

SC's order sidesteps many practical problems, and it can lead to arbitrary removal of some peaceful dogs from institutional areas. That's neither humane nor a solution

Shaleen Attre

Supreme Court's order, yesterday, on community dogs, offers partial reassurance, given how polarised the stray dog debate has become. By upholding Prevention of Cruelty to Animals Act and Animal Birth Control (ABC) Rules, SC has reaffirmed that indiscriminate culling cannot become state policy.

Sterilisation & vaccination remain the legal framework to manage dog populations. That matters. SC has also directed states to strengthen veterinary infra, scale up ABC centres, improve waste management around public spaces, and ensure sterilisation & vaccination of dogs removed from institutions and public areas.

On paper, the directions attempt to address longstanding implementation gaps. The concern, however, is whether a system that has struggled for over two decades to implement even basic ABC infra, can realistically sustain large-scale capture, confinement, sterilisation, vaccination and long-term monitoring, alongside these expanded obligations. The most basic requirement for implementation and impact evaluation is accurate dog census - data India doesn't have.

SC also held that allowing community dogs to remain in institutions and certain public spaces interferes with effective functioning of those places. So, dogs are to be removed from locations such as hospitals, schools etc. Yet the practical realities of implementing such a model in an open country like India remain unclear.

Public areas like bus stands, railway stations aren't sealed environments. Territorial vacuums will be filled by other animals. The scale of what this actually means, on the ground, has barely entered public discussion. India has lakhs of educational institutions. Depending on how the order is interpreted, and implemented, the number of dogs associated with educational campuses alone could well run into crores.

Where will the animals be housed, fed and medically monitored? Who pays for it? Large-scale sheltering of healthy and unhealthy dogs concentrates disease, increases stress, overwhelms veterinary capacity and creates conditions for outbreaks. Given India's size, this isn't a solution but an impending public health crisis.

SC stated that existing infra can handle the process. It observed that NGOs and citizens should support implementation. But this assumption, itself, raises questions. For over two decades, municipalities have struggled to even have temporary ABC holding centres, for animals to be housed a few days post-sterilisation. India has struggled to implement basic sterilisation & vaccination programmes.

On what evidentiary basis are we assuming that existing infra can now suddenly absorb such a massive additional custodial burden? SC acknowledged concerns about certain NGOs involved in ABC implementation, and advised municipalities to undertake due diligence before awarding contracts.

But recognising governance failures is not resolving them. Concerns regarding ABC-centre

overcrowding, inflated sterilisation claims, illegal euthanasia, missing animals and financial irregularities have already emerged countrywide. Expanding confinement systems, without independent oversight, risks reproducing the same failures on a larger scale.

Inconsistent official data on dog bites more likely reflect changes in reporting systems, rather than epidemiology itself. Anti-rabies vaccine delivery data is often used as proxy for bite incidence. Parliamentary replies have, at times, attributed rabies bites and deaths specifically to "stray dogs", while other govt datasets refer simply to "dogs" without distinguishing between pets and community animals.

It's murkier when bite figures are juxtaposed with rabies mortality data. Official rabies death numbers, in

National Health Profile, show low absolute numbers of rabies deaths, with sharp year-to-year fluctuations. Many states report zero cases, and repeated caveats about provisional and incomplete data. Reported deaths in 2018 and 2019 were nearly identical at 116 and 118, while later drops likely reflect reporting gaps, not biological change.

This distinction matters. Two separate, though linked, issues are repeatedly conflated. The first is rabies control, a public-health challenge across species. The second is dog population management, and rising intolerance towards animals in shared spaces. Confusing one for the other leads to poor policy.

Rabid dogs are already legally euthanised, or isolated until natural death. Under the original ABC framework, sterilised & vaccinated community dogs were returned to their territories, unless rabid. The present approach, however, creates a parallel system in which peaceful community dogs risk being permanently removed from institutions and public spaces, irrespective of whether they ever displayed aggression or caused harm. In practice, a community dog's fate may now depend less on its actual behaviour, and more on where it happens to live.

Upshot - many dogs now face displacement, not because sterilisation & vaccination failed, but because their implementation remained partial, inconsistent for decades. India risks drifting towards a fragmented hybrid model of selective removals, overcrowded shelters and inconsistent sterilisation, while still failing to address the underlying drivers of abandonment, waste access, poor vaccination coverage and weak enforcement.

None of this means public safety concerns are unimportant. But sustainable public health policy cannot be built on optics, or symbolic removals alone. India doesn't need reactionary measures presented as systemic reform. It needs transparent data, sustained sterilisation and vaccination programmes, proper waste management, anti-abandonment enforcement, public rabies awareness, and genuine accountability for how public money allocated towards ABC implementation has been spent for over 25 years. Otherwise, we risk creating a larger crisis, while merely relocating the old one out of sight.

The Disappearing Aravalli

Delhi's Ridge: The City's Last Line of Defence Under Siege

As Delhi battles extreme 48°C heatwaves, the crisis signals a deeper ecological emergency. The Delhi Ridge — part of the ancient Aravalli mountain range, the oldest in India — is under relentless attack through encroachments, debris dumping, illegal construction, sewage inflow, and tree felling.

Alarmingly, even as the case remains pending in court, illegal chopping of trees continues with forged signatures and documents. Once destroyed, these irreplaceable ancient ecosystems cannot be recreated. Every lost green patch is making summers hotter, air dirtier, groundwater scarcer, and dust storms fiercer.

The Ridge is not vacant land — it is Delhi's vital survival system. Immediate protection is critical.

Tree Care

HOW TO SAVE FALLEN TREES

When a tree falls down for any reason like storm, pruning, construction, etc. instead of removing them, efforts should be made to restore the tree back to its original location.

HOW TO SAVE A FALLEN TREE

Standard Operating Procedure

Tree Care in the Colony

Do you have trees in your society?

No → Plant Trees

Yes → Are the trees cemented?

Are the trees cemented?

Yes → Remove the cement around the trees

No → Are there any wires/nails/boards on the tree?

Are there any wires/nails/boards on the tree?

Yes → Remove them

No → Pour Water around the trees and spread leaf compost around the trees

Tree Line- The tree line is the row of trees planted along roads, and boundary walls. It helps keep the colony green, cool, and full of life.

What is a gap in the tree line?- A gap means a tree has fallen, dried, or been illegally removed and hasn't been replaced.

What Can You Do?- Residents can plant a native tree in the empty spot, especially during monsoon. With basic care like watering and composting, the tree line can be restored and kept healthy.

Illegal Activities and Penalties

Driving nails into trees causes internal wounds, making them vulnerable to disease, decay, and even death.
Penalty is Rs 10,000/-.

Wrapping or hanging wires around trees constricts growth, damages the bark, and can lead to electric hazards or slow tree death.
Penalty is Rs 10,000/-.

Fixing boards onto trees is illegal. Trees are not advertising spaces. Defacing public property is a crime.
Penalty is Rs 10,000/-.

Digging Within 1 Metre of Trees damages roots, causes stress, and can destabilize the tree. It's illegal and harmful.
FIR will be filed against the person/department involved.

Cementing Around Tree Base (Within 1 Metre) blocks water and air from reaching roots. It suffocates trees, prevents them from growing wider and weakens them structurally.
Forest department will charge the penalty based on the damage caused.

Help Trees & Animals

The Hon'ble National Green Tribunal (NGT), Principal Bench, New Delhi in O.A. No. 62 of 2018 Aditya, N. Prasad & Ors. v Union of India & Ors. vide its Order dated 23.04.2018 directed:

"In the meanwhile, we direct all the public authorities, more particularly Municipal Corporation of Delhi, DDA, DTC, DMRC, NHAI and all Government respondents in this petition including the Director General of CPWD, the Chief Engineer, FWD, to ensure that:

- All the sign boards, names, advertisements, any kind of boards or signages, electric wires and high tension cables or otherwise are removed from the trees forthwith.
- They shall also ensure that the concrete surrounding the trees within one metre of the trees are removed forthwith and all the trees are looked after well and due precaution is taken in future so that no concrete or construction or repaving work is done at least within one metre radius of the trunk of trees. The Vice-Chairperson, the Commissioner, the Chief Engineer, the Director General and all other senior most officers of the Departments/authorities concerned shall be personally responsible for carrying out this order.
- The Departments/authorities concerned shall take all and every prohibitive measures to prevent the defacing of the trees in any manner whatsoever, save only its trimming in accordance with law.
- All the respondents whose boards are fixed on the trees shall be prosecuted by the respective authorities under in accordance with the relevant law."

Nails on trees

Wires on trees

Signboards on trees

Cementing within 1 meter of trees

Digging within 1 meter of trees

Green Helpline : 011-23378513

TREE CARE

1. Remove cement around the tree, soil space around the tree should not be less than 1 meter on all sides.
2. Remove nails, wires and signboards from trees.
3. In case of holes in the tree caused by nails, you can put wet soil in the injured parts of the tree.
4. Ensure no digging or construction is done within 1 meter of trees.
5. Give water to trees daily.
6. In the forest, trees shed their leaves on the soil floor, those leaves mix with the soil and turn into nutrition for the tree roots to absorb. But around the city streets, all the fallen leaves are swept away, so the trees are not receiving that important nutrition from the fallen leaves. This is why it is extremely important to put leaf compost around trees, to make the trees strong and healthy.
7. If you see a tree cut, or with nails, wires, signboards on it or if the tree is cemented within 1 meter, then please call the Green Helpline and report the issue with the exact location, then they will send you the complaint number by SMS for you to follow up.

HOW TO SAVE FALLEN TREES

HOW TO CONDUCT A TREE CENSUS :

1. Number on the Tree :
2. Common name of the tree :
3. Location of the tree :
4. Girth (in cms) :
5. Approximate height (in ft) :
6. Health of the tree :
(D-Dry, H-Healthy, I-Infected, L-Lopped, NI-Nails, Ch-Tree guard choking)
7. Width of open soil around the tree :
(A- Upto 1 ft, B- 1 to 2 ft, C- 2 ftft, D-4ft, E- Over 9ft)
8. Ground condition, outside the open soil :
(S- loose soil, C- cemented, M-metalled, T-illed)
9. Remark:
